Abstract: This research project describes the impact of the information technology on business processes which are increasing rapidly during the last years. This is happening due to a high level of innovations in the field technology used in very efficient way toward economical development. So it is important to analyze its effects because it is directly related to the development and good organization of the financial markets.

The methods that are used while making this research are based on questionnaires conducted by many successful business firms, professionals at the field of business administration and /or at the field of information technology, books and magazines, resources from internet and also from the opinions of public society.

The final results obtained though these methods clarify that the impact of technology is directly influencing on the efficiency and well functioning of the business processes.
